ABSTRACT OF THE DISCLOSURE

An optical filter that is provided at an optical path
between a photoelectric conversion device which converts a
5 subject image formed at a light-receiving surface thereof
to an electrical signal and an optical system which forms
the subject image with a light flux from the subject at
the photoelectric conversion device, to filter the light
flux, includes a stage formed at, at least, a portion of
10 an external circumference of the optical filter.
